DETAILED ACTION

Election/Restrictions

An attempt for provisional restriction requirement was made on Wednesday, July 20, 2006 with Applicant's Attorney, Joseph Teja but not successful.

Restrictions to one of the following inventions is required under 35 USC 121:

- I. Claims 1-7, drawn to a decoding method for a linear block code having parity check matrix, classified in class 714, subclass 801.
- II. Claims 8-53, drawn to a method for iteratively decoding data by performing a predetermined number of iterations, classified in class 714, subclass 797.

The inventions are distinct, each from the other because of the following reasons:

Inventions Group I, a decoding method for a linear block code having parity check matrix and Group II, a method for iteratively decoding data by performing a predetermined number of iterations are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the claims of Group II do not require the limitations of a decoding method for a linear block code having parity check matrix. The subcombination has separate utility such as in a single networked environment.

Art Unit: 2133

Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group I, restriction for examination purposes as indicated is proper.
